### Presents Solar Platform with Integrated Water Purification

**WorldWater & Solar Technologies'**, [WWST] flagship product, Mobile MaxPure® [MMP] provides immediate, distributed infrastructure; potable water, power and water pumping for commercial, construction, development, military applications and more. To date, the company has shipped 60 systems for deployment including areas in Iraq, Afghanistan, Darfur and Haiti.

Lack of infrastructure to supply reliable and ready availability of power and clean water in remote areas and post-disaster scenarios creates both a public health hazard as well as a barrier to security, economic independence and development. The MMP solves the problem of power by using solar energy and storing the electricity in an embedded battery bank. With the problem of reliable power solved as soon as the MMP arrives on site, compelling applications can be operated including water purification and pumping, desalination and reverse osmosis, satellite communications, tools, equipment, and other electric appliances.

The utilization of the new system and the ability it offers to balance solar power to run water purification sets it apart from the rest. Operational anywhere, anytime the MMP can be providing power, water, communications as an immediate, distributed 3-way utility within 30 minutes after arriving on site, providing critical,

Leaders of remote villages in Iraq obtain clean water, power and water pumping capabilities from the Mobile MaxPure®.

immediate infrastructure day and night. The new system can create potable water from virtually any water source including saline sources. Additionally, the technology has been designed to be scalable, with the ability to operate as a stand alone unit or in series to meet demands of volume.

Economically efficient, the MMP creates potable water for fractions of a penny per gallon, making it the lowest cost water delivery system in the world, plus reliable power for remote areas including construction sites. Eliminating the need for external fuel or power, the MMP is a viable solution anywhere in the world, even the most remote areas.
